**Search details**

The effects of parental conflict on the emotional and psychological well-being of young children and the long-term impact for those children - who are emotionally stressed – on their behaviour in teenage years.

**Summary**

Very difficult to find any papers which deal with this topic in the general wording of the question. Lots of articles published on different types of parental conflict and how each of them have an effect on children. Not so much available on the long-term impact of those children who have been affected by parental conflict. The papers supplied represent ‘closest match’ for the question.

15.) Child - Parent Relationship and Potential Problems
Children's physical and emotional status, as well as their social and cognitive development, greatly depend on how their family operate. The rising incidence of behavioural problems among children demonstrates that some families are unable to cope with the increasing stresses they are experiencing.

16.) A multivariate analysis of youth violence and aggression: the influence of family, peers, depression, and media violence.
